

Stop Armed Robberies Now

On January 28, 2011, a bank branch in Takoma Park, MD was robbed. The gunman pistol whipped a customer and used a bank employee as a human shield in his daring attempt to escape. The result was one fatality (the gunman), a wounded police officer, a bank customer in the hospital, terrorized customers, and terrorized employees. **This terrible event could have been prevented.**

There has never been a successful armed robbery at a branch that is protected by an Isotec Weapons Control System.

Weapons Control Systems are the only way to prevent these types of robberies. This branch had extensive bullet resistive glass that protected no one. An armed guard is an expensive first victim who provides another weapon for the criminal. The Weapons Control System prevents weapons from entering the branch protecting your customers, employees and assets. These systems are protecting financial institutions, government facilities, military locations and nuclear sites. **Each system is custom made to fit your branch and is surprisingly affordable.**

Let us show you how to prevent this type of robbery from occurring at your branches.
